If the previous degree was received in another country a nostrification is required.

Qualification requirements: Higher education document is given to a person who mastered the program successfully and was certified. Graduation certification is done by evaluating competence formation level. The form of certification is qualification paper defense.

Program study results: After studying the following abilities should be formed and the following skills should be developed:

- the ability to use professionally profiled knowledge and practical skills in mathematics, physics, chemistry, mechanics, thermodynamics, optics to study the phenomena and processes in the technology of manufacturing of textile materials;
- mastering computer skills at user level, use information systems and technology to solve experimental and practical problems in the field of professional activity;
- the ability to demonstrate experimental skills to assess the quality of textile materials in the laboratory using modern methods, skills of working with modern equipment. It also means the ability to ask the correct questions, knowledge of standard equipment, planning and carrying out research, data collection and analysis, including thorough error analysis and critical evaluation of the results;
- ability to business communications in a professional field, knowledge of business communication, teamwork skills, the ability to debate and to teach the basics of the technology of textile materials;
- possession of methods of description, identification and classification of textile production facilities, the current understanding of the principles of structural and functional organization of textile production technology;
- ability to develop optimal technology of textile materials and products for various purposes, including the implementation of design, its technological and technical and economic designing;
- ability for implementation of technological processes of textile materials and products, prevent and eliminate the causes of process disturbances;
- ability to organize logistics of textile materials and guide them;
- ability to identify the types of defects in the finished product, its causes and to perform justification for activities to eliminate the causes of defects;
- ability to identify measures for improving the efficiency of manufacturing processes of products;

- possession of skills to create textile materials and articles in various art systems and the development collections of textiles; free, fully informed decisions of constructive and artistic problems based on actual their performance from nature, in the material.
- ability to assess the functionality of the equipment, ways of its development and increase machine productivity and quality processes;
- ability for effective decisions of problems of professional activities with obligatory consideration the requirements of occupational safety and guaranteeing the preservation of life, health and capacity for work in professional activities.
- possession of service skills of knitting equipment of different types;
- ability to use the knowledge and understanding of the fundamentals of professional disciplines in practice;
- ability to use computer technologies for the decision of technical problems using the proper software, knowledge of how to analyze and display the results;
- mastering the professional skills to work independently or in groups (laboratory work, including leadership skills in their implementation - the ability to communicative), the ability to get results within a limited time with a focus on professional integrity and prevent plagiarism;
- demonstrated skill in foreign language, including special terminology for professional communication and literature search.

Employment competences: After a full academic course a specialist in social work may hold the following positions: in companies, small businesses, industries and institutions of technological, commercial and research sector, the field of protection of the environment and health, taking up the positions of a technologist, a master, the head of production units, clothing manufacturers, textile designers, a researcher, an expert in support and determination of quality.

Further study perspective: Bachelor of a specialty 182 « Light industry technologies» can apply for Master Program in subject-related degrees in field of knowledge18 «Production and technologies»

Department graduating a student with degree: Department of Light Industry

Institute/faculty: Faculty of Engineering

Educational program supervisor: Mazniev Ye. O., Associate Professor, Ph. D in Technical Sciences, tel. +38050-166-74-49.
